Legend

The *commit* that is the head of the *currently checked out local branch*; this commit is reflected in your working directory

The *commit* that is the head of the unmerged *remote-tracking branch associated with the currently checked out local branch*; merge this commit with the above commit to update the local repository with the progress from the remote repository

The *commit* that is the head of the *remote-tracking branch associated with the currently checked out local branch*; push to update the remote repository with your progress

A *commit*

A *commit* that is not currently represented in your working directory. Either the commit is in a different locally tracked branch, or you need to merge your local branch with its remote-tracking branch
